

## Cost Effective Managed Services for Small and Medium Business

Your business grows more and more reliant on technology every day. Relying on technology whether it's your network, routers, scanners, PCs, printers or software, also requires that you be proactive to protect your business.

**Your Network  
Affects Your  
Business  
24/7**

**When your network goes down your entire company is affected. Do you really know how much?**

There is the obvious and immediate – Internet access, email, company web site, e-commerce, remote office connections. But consider the less obvious and yet even more critical functions – client service and support, finance and accounting functions, sales data, order entry, telephone and file access.

**Security and  
Support Take  
Time and Money**

**Think about the time and money you devote to your IT security and support. Do you know where your resources go?**

You may immediately think – inconsistent hardware and software performance, maintaining adequate security protection and day to day backup of critical business data. But what about internal resources that are often rerouted to manage urgent technology issues? Do you find yourself reacting rather than being proactive in order to address your company's technology needs?

**Expert  
Resources  
Save Time  
and Money**

**A Managed Services provider provides expert resources and saves you time and money. What if your business could have the following?**

- *Predictable and scalable monthly costs. Probably an even lower cost that would scale as you do.*
- *Increased staff productivity. Less down time for everyone and no reassignment of valuable company resources.*
- *Improved network reliability. External threats are reduced and issues are addressed proactively to reduce their impact.*
- *Expert resources to plan the technology to meet your business needs. Systems that can allow you to grow your business.*
- *Access to highly specialized resources. Exactly when you need them.*

## **Managed Services by Autonomic Software**

**Managed services return a company to the task of doing business. What if you could stop worrying about the security and performance of your computers?**

Autonomic Software is an expert in vulnerability management and network security. With a worldwide installed customer base, the company utilizes its own proven, patented technology and flagship product, ANSA Suite, to provide security and support services for small-to-medium business.

Autonomic's customers utilize managed services to remotely monitor, update and manage all security patches for computers and software in the network. Cyber attacks are blocked and the network is kept up and running.

Leased equipment, software releases and hardware configurations are tracked and managed. Software is deployed from a single source to all relevant computers whether local or remote. Reports are generated for internal business use or for HIPPA and other government compliance requirements.

Autonomic Software provides the same services that big companies take for granted...giving your company the power of an expert vulnerability management and security team at your service night and day.

## **Benefits of Managed Services**

- **Less down time**
- **Reduced external threats**
- **Up-to-date security patches**
- **Elimination of viruses and spam**
- **Access to expert resources**
- **Predictable, low monthly costs**
- **100% accuracy**
- **Works in all computing environments**
- **24/7 tech support**
