

Autonomic Software Brings Management Reality to the Security and Compliance Discussion at Oracle OpenWorld 2007

Autonomic Software experts to discuss increasing compliance and reducing vulnerability

November 11, 2007 – Autonomic Software, a provider of automated management solutions, will provide visitors of the Security, Risk and Compliance Pavilion, Booth 3830 in Moscone West at Oracle OpenWorld 2007, with practical examples and demonstrations of how administrators can implement the high-level security, risk and compliance policies that their enterprises advocate.

“Managing security used to mean keeping the bad guys out,” said Tony Gigliotti, President and Chief Executive Officer of Autonomic Software. “But with so many enterprise applications and databases being connected in some way to the Internet, security is about making sure these application and database configurations are not vulnerable.”

Autonomic Software experts will share examples of how their customers are able to convert high-level security and compliance requirements into real configuration policies that administrators can implement and automatically detect and resolve configuration vulnerabilities in complex, n-tier environments. Visitors will discover how to minimize the time they spend on compliance reporting. There will also be demonstrations of Autonomic Software’s patented technology supporting Oracle’s enterprise security and GRC applications.

Autonomic Software is a member of Oracle PartnerNetwork.
