Autonomic Software to Sponsor the Security, Risk Management, and Compliance Pavilion at Oracle OpenWorld

Autonomic gives Oracle users a highly secure, monitored, compliant enterprise; extends benefits of Oracle® Enterprise Manager to the desktop and automates policy-driven configuration control and energy management

Danville, CA – September 23, 2008 – Autonomic Software, Inc., a provider of automated security and network management solutions and member of the Oracle® PartnerNetwork, today announced it will exhibit at Oracle OpenWorld as a sponsor of The Security, Risk Management and Compliance (“SRC”) Pavilion (Booth #3838 in Moscone West, Kiosk #1).

The company, a member of Oracle's Enterprise Security and GRC Initiative, will demonstrate its lightweight, cross-platform technology for automatically securing and patching Oracle servers, stacks and desktops, and enabling automated, policy-driven configuration control and asset management. In addition, Autonomic extends the capabilities of Oracle Enterprise Manager, and built-in energy management capabilities control energy consumption down to the desktop, allowing the product to pay for itself in the first year.

“Oracle has been impressed with Autonomic Software’s efforts to deliver value to our customers – initially through participation in the Security and GRC Initiative, and now also in the Oracle Unbreakable Linux program,” said Monica Kumar, senior director, OpenSource Technology Marketing at Oracle. “We look forward to their presence in the SRC Pavilion, and to the release of a new Autonomic product specifically designed for Oracle customers.”

“Our relationship with Oracle has matured wonderfully over the last year, and we’re very excited about being a sponsor of the SRC Pavilion at Oracle OpenWorld,” said Tony Gigliotti, president and CEO of Autonomic Software. “We’re seeing excellent response to our products from IT

professionals working in Oracle Enterprise environments, who find that our lightweight suite of tools rapidly and automatically increase both the security and manageability of their networks.”

Today’s announcement follows recent news that Linux version of Autonomic’s flagship ANSA Suite has qualified under the Oracle Unbreakable Linux support program. The ANSA Suite allows IT professionals to exert and maintain complete, automated control of many critical, time-consuming network management functions, including patch management, network asset management, network configuration management, software deployment, mobile device management and security, and power conservation. The result is rapidly increased network availability, usability, manageability, and maintainability.

The ANSA Suite is built on N-tier architecture for scalability and performance. IT System administrators delegate the daunting, resource-intensive network security tasks to ANSA Suite where they are transformed into highly automated, policy-driven, systemic processes that give customers directory and database independence, and save time and resources. The ANSA Suite installs quickly, is extremely accurate and highly flexible.

About the Oracle PartnerNetwork

Oracle PartnerNetwork is a global business network of more than 20,000 companies who deliver innovative software solutions based on Oracle software. Through access to Oracle's premier products, education, technical services, marketing and sales support, the Oracle PartnerNetwork program provides partners with the resources they need to be successful in today's global economy. Oracle partners are able to offer their customers leading-edge solutions backed by Oracle's position as the world's largest enterprise software company. Partners who are able to demonstrate superior product knowledge, technical expertise and a commitment to doing business with Oracle qualify for the Certified Partner levels.
