Autonomic Software's ANSA Platinum Power Conservation Offers Greenest Option for Controlling IT Energy Costs, Carbon Footprint

*Combination of energy savings and utility rebates creates ROI 'out of the box' -
Total savings to exceed cost of software in first year*

Danville, CA – October 7, 2008 – Autonomic Software, Inc., a provider of automated security and network management solutions today announced the greenest solution available for network administrators charged with controlling energy expenditures and the IT carbon footprint. Included as part of Autonomic Software's ANSA Platinum, the company's Power Conservation software lets managers set energy policies for PCs, servers and other networked devices, and to automatically implement these policies from a single user interface, regardless of the size of the organization. Autonomic's Power Conservation software allows companies to eliminate waste and inefficiency in their energy usage, thereby reducing their carbon footprint.

According to energy savings figures from the Department of Energy's EnergyStar website¹, an enterprise with ten thousand networked PCs can anticipate savings in excess of \$1 million per year. Even for companies with only a few dozen PCs, savings will be significant. In addition, most utility companies serving major US cities offer rebates for companies that lower their energy consumption. The combination of savings and rebates will result in many companies recouping the investment in the ANSA Platinum Suite in less than one year.

“Autonomic's Power Conservation has given us the ability to reduce our energy usage and carbon footprint, while still effectively and automatically managing and securing all our desktops and servers,” said Brian DeLuca, IT Director for Bank of Nevada. “Our energy costs are dropping, and we are now applying for our first utility rebates based on those savings.”

“Adding this new capability to ANSA Platinum allows our customers to easily integrate power conservation with the security and system management processes we've already automated for them,” said Tony Gigliotti, CEO of Autonomic Software. “Energy costs are just another of the growing list of cost categories IT managers and executives are tasked with managing. We've simply extended our technology to turn energy savings into a highly automated, green, policy-driven, systemic process.”

Autonomic's Power Conservation creates policy-driven power management of distributed computers. In addition, it:

- Controls power profile setting on Windows
- Scales from a single PC to an entire global enterprises

- Provides fine-grained controls for hibernation, standby, subsystem-only shut down
- Offers easy-to-use control policies target groups, domains, any category or group
- Includes distributed Wake-On-LAN functionality that synchronizes all ANSA systems maintenance processes with Power Conservation
- Contains a centralized, intuitive graphical user interface and dashboard-driven policy-setting
- Enables comprehensive , multi-level reporting

About ANSA Platinum

ANSA Platinum allows IT professionals to exert and maintain complete, automated control of many critical, time-consuming network management functions, including patch management, asset management, configuration management, software distribution, and power conservation. The result is a rapid increase in network availability, usability, manageability, maintainability, and security.

About Autonomic Software, Inc.

Autonomic Software provides automated management and security solutions. Founded in 2003, the company helps customers create a continuously protected environment by combining patch management, asset management, configuration management, software distribution, and power management. Autonomic's products are available through our nationwide reseller program or direct sales. Autonomic Software also offers on-demand hosted solutions in the SMB market as well. For more information on Autonomic Software's products and services, call 925-820-8020 or visit the company's website at <http://www.autonomic-software.com>
